Cloud-Native Developer | .NET Core | Power Platform | REST APIs | Automation

Developer combining .NET Core APIs with Power Platform apps and Power Automate workflows, Docker and cloud pipelines.

Skills

Programming Languages:	C#, ASP .NET, Python, Java, JavaScript, Kotlin, SQL, HTML/CSS, PHP, Flutter, C++
Tools/Frameworks:	Power Platform, Power BI, AWS, Splunk, Flask, React, Docker, Git, Firebase, Linux

Education

University of Ottawa — Ottawa, ON
Bachelor of Applied Science, Software Engineering *GPA: 3.7/4.0* — Sept 2020 - Dec 2024

Work experience

Software & Database Analyst — May 2024 - Present
Elections Canada — Ottawa, ON

- Leveraged **Power Automate** to support and streamline **ETL validation workflows** by coordinating iterative testing processes, triggering **Python** comparison scripts, and automating pass/fail notifications with links to validation reports for stakeholders
- Built internal **data analytics dashboards** using **Power BI** to display database health, operational metrics, validation trends, and data quality issues for directorate and senior management.
- Implemented a reusable ETL validation framework using **Python** and Apache Spark, enabling automated data validation and improving data quality assurance across multiple environments.
- Coordinated version-controlled **database deployments** and release processes, improving traceability and reliability of production data infrastructure across shared environments.
- Collaborated in an **Agile cross-functional** team with stakeholders to improve ETL data workflows, release quality, and production reliability.

Software Developer — September 2023 - April 2024
University of Ottawa — Ottawa, ON

- Supported development and maintenance of **Microsoft Power Platform applications**, including **Power Automate**, to enhance workflow automation, data processing, and operational efficiency.
- Developed **Power Platform solutions** including **Canvas Apps and Model-Driven Apps** integrated with **C# backend services** to support event management, user interactions, and data-driven workflows
- Implemented automated workflows using **Power Automate**, leveraging **HTTP triggers, scheduled flows, and API integrations** to enable real-time notifications, approvals, and data synchronization across systems
- Designed end-to-end integrations between **Power Apps and REST APIs**, enabling seamless communication between frontend applications and backend services
- Redesigned the University of Ottawa's emergency alert website with **C# (.Net Core)** and **Angular**, introducing a modern, interactive UI. Used by over **20,000** students daily.
- Optimized existing **C#** REST APIs by reducing **LINQ** query execution time for event data lookup by **30 %** and lines of code by **40 %**
- Participated in end-to-end **Software Development Lifecycle (SDLC)** processes, from requirements gathering and system design to implementation, testing, and production deployment

Cloud Developer Intern — May 2023 - August 2023
Trend Micro Inc. — Ottawa, ON

- Utilized **AWS Lambda** to monitor client files, images and code uploaded to the cloud and scan for vulnerabilities using Anchore APIs and Grype
- Programmed robust error handling for **AWS Lambda** functions in GoLang using goroutines to ensure proper timeout and recovery, reducing data corruption and improving service reliability

Cloud Developer Intern — September 2022 - December 2022
Trend Micro Inc. — Ottawa, ON

- Developed a serverless automation solution using **AWS Lambda, S3, and Athena crawlers** to trigger metadata updates on data changes, significantly reducing manual intervention and operational overhead
- Configured **Splunk** and **AWS CloudWatch** alarms for proactive monitoring of test logs and crashes, enhancing system reliability and reporting.

Full Stack Developer Intern — January 2022 - April 2022
Applied Mind Inc. — Ottawa, ON

- Containerized a full-stack application with **Docker** for reliable **production deployments**, and automated event detection by adding events to **PostgreSQL** using **Python** and **GraphQl**, reducing testing time by **10 seconds**.
